13

Business Intelligence

Aim

To use the data you're already collecting to make better decisions about your business.

Examples:

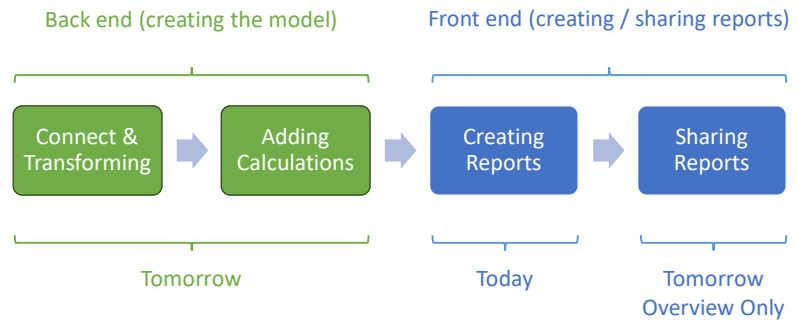

- ✓ How can the business attract new customers?
- ✓ How can we improve the project efficiency?
- ✓ Who are the competitors and how do they compare?
- ✓ What is driving profitability?
- ✓ Where can expenses be lowered?

Our scenario

- ♥ Fictitious training organisation
- ♥ Head office in Perth, with sales and administration staff
- ♥ No permanent trainers or classrooms
- ♥ For example: when the sales team have enough participants to run a course in Sydney:
 - Hire a Venue in Sydney from a set we use regularly
 - Hire a Consultant (trainer) in Sydney to run the course
 - Send materials to a printer in Sydney to be delivered to the venue
 - The course runs
 - The administration staff in Perth invoice the clients

Let's go and play ...
